

# Table of Contents

|                             |      |
|-----------------------------|------|
| Foreword . . . . .          | ix   |
| Executive Summary . . . . . | xiii |

## Chapter • One **Pump Fundamentals, 1**

|                                                                                                      |    |
|------------------------------------------------------------------------------------------------------|----|
| 1.1 Introduction . . . . .                                                                           | 1  |
| 1.2 How a Rotodynamic (Centrifugal [Radial Flow], Mixed Flow,<br>and Axial Flow) Pump Works. . . . . | 1  |
| 1.3 Pump Selection Considerations . . . . .                                                          | 7  |
| 1.4 Understanding the Pump's Performance Curve . . . . .                                             | 7  |
| 1.5 Pump Suction Intake Considerations . . . . .                                                     | 22 |
| 1.6 Pump Affinity Rules. . . . .                                                                     | 23 |
| 1.7 Operation of Pumps . . . . .                                                                     | 23 |
| 1.8 Key Takeaways . . . . .                                                                          | 24 |

## Chapter • Two **Positive Displacement Pump Fundamentals, 27**

|                                                        |    |
|--------------------------------------------------------|----|
| 2.1 Introduction. . . . .                              | 27 |
| 2.2 Pump and System Interaction . . . . .              | 32 |
| 2.3 Improving Performance of Existing Systems. . . . . | 38 |
| 2.4 Optimizing New Designs . . . . .                   | 41 |
| 2.5 Calculating Cost of Ownership . . . . .            | 47 |
| 2.6 Key Takeaways . . . . .                            | 47 |

## Chapter • Three **Common Pump Drivers and Variable Speed Drives, 49**

|                                           |    |
|-------------------------------------------|----|
| 3.1 Introduction. . . . .                 | 49 |
| 3.2 Induction Motors . . . . .            | 50 |
| 3.3 Synchronous Motors. . . . .           | 62 |
| 3.4 Permanent Magnet (PM) Motors. . . . . | 67 |

|                                                                             |    |
|-----------------------------------------------------------------------------|----|
| 3.5 Considerations for Electric Motors to Improve System Efficiency . . . . | 67 |
| 3.6 Common Variable Speed Drives (VSD) Used with Motors. . . . .            | 72 |
| 3.7 Key Takeaways . . . . .                                                 | 90 |

## Chapter • Four

### **Pump and System Interaction, 93**

|                                                      |     |
|------------------------------------------------------|-----|
| 4.1 Basic System Characteristics . . . . .           | 93  |
| 4.2 Piping System. . . . .                           | 97  |
| 4.3 The Pump Curve. . . . .                          | 99  |
| 4.4 System Operating Points for Single Pump. . . . . | 104 |
| 4.5 Multiple Pumps . . . . .                         | 116 |
| 4.6 Complex Piping Systems . . . . .                 | 120 |
| 4.7 Key takeaways . . . . .                          | 124 |

## Chapter • Five

### **Improving the Performance of Existing Pumping Systems, 125**

|                                                                                               |     |
|-----------------------------------------------------------------------------------------------|-----|
| 5.1 What is an Energy Assessment? . . . . .                                                   | 125 |
| 5.2 Basic Framework for Conducting an Energy Assessment. . . . .                              | 126 |
| 5.3 Diagnostics and Data Collection . . . . .                                                 | 131 |
| 5.4 Using the Data to Identify Opportunities . . . . .                                        | 144 |
| 5.5 Evaluating opportunities . . . . .                                                        | 155 |
| 5.6 Pumping Systems Control . . . . .                                                         | 157 |
| 5.7 Getting Started on Optimizing Your Pumping Systems to Gain Significant Benefits . . . . . | 164 |
| 5.8 Numerical Example of BEP Evaluation and System Modification Options . . . . .             | 167 |
| 5.9 Key Takeaways . . . . .                                                                   | 169 |

## Chapter • Six

### **Building Better Pumping Systems: Optimizing New Designs, 171**

|                                                     |     |
|-----------------------------------------------------|-----|
| 6.1 Opportunities Available In New Systems. . . . . | 171 |
| 6.2 Pump Piping System Optimization . . . . .       | 188 |

|                                                                                              |     |
|----------------------------------------------------------------------------------------------|-----|
| 6.3 How Pumping Systems Change Over Time . . . . .                                           | 191 |
| 6.4 The Value of Modeling and Optimizing New Designs . . . . .                               | 196 |
| 6.5 Pump Design Considerations in New Build Systems. . . . .                                 | 199 |
| 6.6 Design for the Future. . . . .                                                           | 211 |
| 6.7 Control Strategy Optimization—System Start-Up from Optimization<br>Perspective . . . . . | 216 |
| 6.8 Key Takeaways . . . . .                                                                  | 220 |

## Chapter • Seven

### **Calculating Cost of Ownership, 223**

|                                                                |     |
|----------------------------------------------------------------|-----|
| 7.1 Introduction. . . . .                                      | 223 |
| 7.2 Elements of LCC (Reference 2) . . . . .                    | 224 |
| 7.3 Analyze Life Cycle Cost Before Making a Decision . . . . . | 233 |
| 7.4 Key Takeaways . . . . .                                    | 236 |

## Chapter • Eight

### **Summary and Making the Business Case, 237**

|                                                |     |
|------------------------------------------------|-----|
| 8.1 Summary—Pump System Optimization . . . . . | 237 |
| 8.2 Summary—Pumps and Drivers . . . . .        | 237 |
| 8.3 Summary—Pump System . . . . .              | 238 |
| 8.4 Summary—The Business Case . . . . .        | 239 |

## Appendix A

### **Glossary, Symbols, and Acronyms, 241**

## Appendix B

### **References, 265**

## Appendix C

### **Pump System Optimization Case Studies, 267**

Appendix D  
**Shaft Sealing, 301**

Appendix E  
**Tool Matrix, 323**

Appendix F  
**Evaluating Alternative Pumping Systems using  
Weighted Average Criteria, 335**

Appendix G  
**Investment Justification and  
Decision-Making, 339**

Appendix H  
**Case Study/Image Credits, 347**

Appendix I  
**Index, 349**
