Patterson Pump Company Approved through Hydraulic Institute's Pump Test Lab Approval Program

Parsippany, NJ, April 11, 2019 – The Hydraulic Institute introduces member company, Patterson Pump Company, as the latest company to have their pump test laboratory approved through the HI Pump Test Lab Approval Program. The approved pump test lab is located at 2129 Ayersville Road, Toccoa, GA.

The HI program assists pump OEMs and other pump test laboratories improve their current laboratory procedures and policies by working with an experienced third-party auditor to develop and maintain accurate, uniform and repeatable pump testing protocols. The program also helps participating organizations adhere to the requirements of the international test laboratory accreditation standard (ISO 17025) concerning test measurement equipment.

As the DOE requires increased efficiencies for commercial and industrial pumps, a manufacturer's ability to demonstrate accurate pump performance will be an important part of compliance. Performing these tests in a lab that not only applies the industry standard (HI 40.7) but also stands up to an independent third party audit will build confidence in the market that the stated efficiencies will be achieved.

The pump test lab approval program is HI's latest program designed to support the DOE's energy saving initiatives. "This accreditation illustrates Patterson's commitment to comply with industry standards for determining pump efficiency and energy consumption through accurate and reliable testing practices. This along with innovative design techniques will help our customers prepare today for tomorrow's world," said Alex Moser, Engineering Manager, Patterson Pump Company.

In addition to support of the DOE's initiatives, Patterson Pump Company upholds their commitment to their customers. "Receipt of the Hydraulic Institute's Pump Test Lab Approval certification is a major milestone for Patterson Pump Company. This approval exhibits our commitment to continuous improvement and fulfilling the customer's pursuit of superior pump efficiency and energy savings. We are proud to be an industry partner with Hydraulic Institute to build confidence in the marketplace and provide for energy efficient pumping solutions," said Kerby Pope, Assistant General Manager, Patterson Pump Company.
