

Table of Contents

Foreword	xiii
Acknowledgements	xiv
About the Hydraulic Institute	xvi
About Pump Systems Matter	xvii

Chapter • One

Introduction, 1

1.1 Objective	1
1.2 General Power Industry Update	1

Chapter • Two

Today's Power Industry, 3

2.1 Process Improvements and Considerations	5
---	---

Chapter • Three

Power Plant Configurations and Considerations, 7

3.1 Steam Electric Power Plants	8
3.2 Power Plant Pumps	13
3.2.1 Boiler Feed Pumps	13
3.2.2 Boiler Feed Booster Pumps	21
3.2.3 Condensate Pumps	21
3.2.4 Condenser Circulating Water Pumps	22
3.2.5 Boiler Circulating Pumps	24
3.2.6 Heater Drain Pumps	26

Chapter • Four

Overview of Combined-cycle Plants, 27

4.1 Introduction	27
4.1.1 The Importance of Uptime, Reliability, and Availability	27
4.2 Description	28
4.3 Operation	30
4.3.1 Plant Design and Operation	31

Chapter • Five

Typical 400-MW, Combined-cycle Plant, 35

5.1 Process	35
5.1.1 Overview – Services	35
5.1.2 Fluids Handled	35
5.1.3 Pump Types Used	36
5.1.4 Special Features, Characteristics, and Considerations	36
5.2 Machinery/Pumps	36

Chapter • Six

Specific Processes and Pump Selection, 43

6.1 Main Service Pumps	43
6.1.1 Boiler Feed System	43
6.1.2 Boiler Feed Booster Pumps	52
6.1.3 Boiler Circulating Pumps	53
6.1.4 Boiler Fill (or Jockey) Pumps	54
6.1.5 Condensate System	55
6.1.6 Heater Drain Pumps	56
6.1.7 Circulating Water Pumps	59
6.1.8 Commissioning	73
6.2 Auxiliary Service Pumps	75
6.2.1 Screen Wash Pumps	75
6.2.2 Auxiliary Cooling Water Pumps	77
6.2.3 Fogger (Wet Compression) Pumps	79
6.2.4 Oily Water Pumps	80
6.2.5 Sump Pumps	81
6.2.6 Chemical Metering Pumps	82
6.2.7 Makeup Water Pumps	84

Chapter • Seven

Summary, 87

7.1 Status	87
7.2 Capacity and Demand	87
7.3 Infrastructure	88
7.4 The Way Forward	88

Appendix A

Pumps for Condensing Combined-cycle Power Plants, 91

Appendix B

Materials of Construction for Main Service Pumps, 109

B.1 Boiler Feed System	111
B.1.1 Boiler Feed Pumps	111
B.1.2 Boiler Feed Booster Pumps and Boiler Circulating Water Pumps	114
B.1.3 Boiler Fill Pumps	114
B.2 Condensate System and Heater Drain Pumps	115
B.3 Circulating Water Pumps	115

Appendix C

Coupling Selections, 119

Appendix D

Seals and Packing Recommendations, 125

D.1 Seals	126
D.1.1 Chart Legend for Seal Recommendation Sheet	126
D.1.2 Seal Chamber Pressure	132
D.1.3 Energy Efficiency and Life Cycle Costs	132
D.2 Packing	133

Appendix E

Lubrication Systems, 141

E.1 Filtration	142
E.2 Cooling	142
E.3 Lube Oil Tank Heating	143
E.4 Instrumentation	143
E.5 Operation	143

Appendix F
Image Credits, 149

Appendix G
Bibliography, 151

Appendix H
Combined-cycle Power Terms and Definitions, 155

Appendix I
Index, 169

List of Figures

3.1	Diagram of a simple steam power cycle with a condensing turbine	10
3.2	Diagram of a typical pulverized coal condensing steam power plant	11
3.3	Diagram of a closed feedwater cycle	14
3.4	Diagram of an open feedwater cycle with one deaerator and three closed heaters	15
3.5	Multistage ring-section pump (BB4)	16
3.6	Impeller	16
3.7	Axially split casing pump (BB3)	18
3.8	Radially split casing pump (BB5)	19
3.9	Radially split casing pump (BB2)	20
3.10	Vertical multistage can pump (VS6)	23
3.11	Overhung impeller pump (OH2)	25
4.1	Combined-cycle power plant, one-on-one	32
5.1	Combined-cycle power plant, two-on-one, 400 MW	38
6.1	Three-dimensional view of multistage ring-section pump (BB4)	47
6.2	Hydraulic axial thrust	49
6.3	Compensation of axial thrust by balance disk	49
6.4	Compensation of axial thrust by balance disk or stepped balance drum together with thrust bearing	50
6.5	Compensation of axial thrust by balance drum and axial thrust bearing	50

6.6	Opposed impeller design	51
6.7	API Plan 13 installed in a VS6-style pump - with shutdown seal flush system	57
6.8	API Plan 13/62 installed in a VS6-style pump	58
6.9	Circulating water flow diagram	60
6.10	Typical circulating water pump designs illustrating wet pit and dry pit designs	62
6.11	Pump assembly (left), removable inner element (middle), pump casing (right)	65
6.12	Maximum operating speeds for single suction pumps (metric units) with $S = 165$	70
6.13	Maximum operating speeds for single suction pumps (US customary units) with $N_{SS} = 8500$	71
6.14	Power plant screen wash/circulating water intake configuration	76
6.15	Closed-loop cooling water pump flow diagram	78
6.16	Chemical metering pump	83
A.1	Overhung flexibly coupled horizontal foot mounted - single stage - ASME B73.1 (OH1)	92
A.2	Overhung flexibly coupled horizontal centerline mounted - single stage - API-610 (OH2)	93
A.3	Overhung flexibly coupled vertical end suction (OH3A)	94
A.4	Overhung close coupled vertical end suction (OH5A)	95
A.5	Between bearings axially split - single stage (BB1)	96
A.6	Between bearings radially split - single stage (BB2)	97
A.7	Between bearings multistage axially split (BB3)	98
A.8	Between bearings multistage radially split single casing (BB4)	99
A.9	Between bearings multistage radially split double casing with opposed impeller, volute (BB5)	100
A.10	Between bearings multistage radially split double casing with stacked in-line diffuser construction (BB5)	101
A.11	Vertical, single or multistage, short setting, open line shaft (VS1)	102
A.12	Vertical, single or multistage, mixed flow, short setting, open line shaft (VS1)	103
A.13	Vertically suspended single casing separate discharge (sump) line shaft (VS4)	104

A.14	Vertically suspended single casing separate discharge (sump) cantilever (VS5)	105
A.15	Vertically suspended double casing diffuser (VS6)	106
A.16	Vertically suspended double casing volute (VS7).	107
D.1	Injection arrangement	135
D.2	Lantern ring injection arrangement	135
D.3	Product-lubricated arrangement	136
D.4	Bull ring arrangement	136
E.1	Main feed pump lube oil system	146

List of Tables

5.1	Main service pump selection	37
5.2	Auxiliary service pump selection	40
5.3	Main service pumps - special considerations	41
5.4	Auxiliary service pumps - special considerations.	41
B.1	Materials of construction for main service pump	110
B.2	Materials for type BB3 - material class C-6 materials: chrome case, chrome impeller, chrome fitted	112
B.3	Materials for type BB4 - material class C-6 materials: chrome case, chrome impeller, chrome fitted	112
B.4	Materials for type BB5 - volute style - material class S-6 (BFW-Mod) materials: carbon-steel barrel, covers, chrome inner case, impellers, and wear parts	113
B.5	Materials for type BB5 - diffuser style - material class C-6 (modified) materials: chrome barrel, covers, diffusers, impellers, and wear parts	113
B.6	Materials for type BB2 - material class C-6 materials: chrome case, chrome impeller, chrome fitted	114
B.7	Condensate system and heater drain pump materials for type VS6 - material class S-1, S-5, and S-6 materials: carbon-steel barrel	115
B.8	Circulating water system materials for type VS1 - material class I-1, S-1, S-3, and D-1 materials	116
B.9	Vertical wet pit pumps: material selection for brackish water and seawater service	117
C.1	Coupling family suitability per application	120
C.2	Types of couplings	123

D.1 Seal recommendations for combined-cycle power plants – main service pumps	128
D.2 Seal recommendations for combined-cycle power plants – auxiliary pumps	130
D.3 Packing recommendations for combined-cycle plants	134
D.4 Packing recommendations for combined-cycle plants - alternate to mechanical seals	138
E.1 Lubrication system - typical features and options	144
